

EMERY OLEOCHEMICALS

Emery Oleochemicals LLC is a world leader in oleochemicals, the class of chemicals made from natural fats and oils. Emery Oleochemicals LLC uses natural, renewable raw materials—the oils from soybeans, coconuts and palm kernels as well as fats from tallow—to manufacture an extensive line of fatty acids, glycerine and triacetin. These oleochemical products are fundamental to virtually every type of manufacturing across a broad range of industries. The production of adhesives, cosmetics, detergents, foods, paints, coatings, papers, pharmaceuticals, fragrances, shampoos, plastics, lubricants and agricultural chemicals, for example, all require oleochemicals.

GMZ is authorized to sell the following Emery Oleochemical products in the territory specified on the map on the back of this bulletin.
